

NAVID Jaberi

Frontend Developer
(Vue.js & Nuxt.js)
(React & Next.js)

Summary

Frontend Developer with 4+ years of hands-on experience building production-grade Vue.js and Nuxt 3 applications — including multi-app SaaS platforms, SEO-driven landing pages, and Progressive Web Apps. Strong in SSR/SSG, state management (Pinia/Vuex), and designing scalable component architectures across multiple connected frontend layers. Core JavaScript/TypeScript foundation transfers well across frameworks — also comfortable building with React and Next.js. Self-taught from the start of my career, with a continued focus on performance optimization, accessibility, and clean, maintainable code. Looking for a mid-level role where I can take ownership of complex frontend systems.

Languages

- Persian (Farsi) – Native
- English – Upper-Intermediate (B1–B2)
- Turkish – Basic

Skills:

- Core Stack (Production Experience):
Vue 2/3, Nuxt 3, Vue Router, Composition API, Options API, Pinia, Vuex
- Languages:
JavaScript (ES6+), TypeScript, HTML5, CSS3
- UI & Styling:
Tailwind CSS, Bootstrap, Vuetify, Quasar, Sass, Less
- Architecture & Concepts:
SSR, SSG, SPA, PWA, Component Architecture, Reusable UI Patterns
- API & Data:
RESTful APIs, Axios
- Build Tools:
Vite, Webpack, NPM, Yarn
- Tools & Workflow:
Git, GitLab, Agile (Scrum), Collaborative Development
- Also Building With (Personal Projects):
React, Next.js
- Currently Strengthening:
Unit Testing with Jest (Vue Test Utils) — applying course knowledge to real component tests

Professional Experience

Front-End Developer – Dongi (Full-Time, Remote) | Nov 2025 – May 2026 (7 mos)

<https://dongi.ir/>

- Contributed to the development of an internal CRM system used by company staff to manage operations and user data.
- Developed and optimized SEO-friendly landing pages with a focus on performance, accessibility, and search engine visibility
- Implemented SEO best practices including semantic HTML, structured data (Schema.org), and performance optimizations.
- Built features using Vue 3, Nuxt 3, Vuetify, Tailwind CSS, and Quasar within a collaborative Git/GitLab workflow.
- Collaborated with backend developers and team members in an Agile (Scrum) environment within a fully remote team.
- Contributed to development tasks on the main company website alongside CRM and landing page development.

Front-End Developer in Qman(Part-Time) | july 2024 – june 2026 (1 yr 12 mos)

<https://qman.ir/>

- Leading the frontend development of a large-scale platform for cafes and restaurants to generate dynamic menus and QR codes.
- Built multiple interconnected Nuxt 3 applications, including the main website, an admin panel, and a dedicated dashboard for cafe owners.
- Developed customizable, real-time editable menu templates using Nuxt 3, Vuetify, Tailwind CSS, Pinia, and TypeScript with PWA architecture.
- Implemented complex data handling and transformation flows, managing diverse data structures and communication between frontend and backend services.
- Designed scalable frontend architectures that integrate multiple frontend layers with a centralized backend system.

Freelance Front-End Developer in Mizooni (Part-Time, Remote) Feb 2024 – Sep 2024 (8 mos)

<https://mizooni.app/>

- Designed and developed a women's health & wellness Progressive Web App (PWA) using Nuxt 3, Vuetify, Tailwind CSS, and JavaScript.
- Delivered a smooth, accessible, mobile-first user experience, focusing on usability and responsive UI.
- Collaborated with a senior developer and cross-functional stakeholders to implement clean UI based on modern UI/UX principles.
- Optimized PWA performance and offline-friendly behavior to improve reliability across devices.

Front-End Developer in Asia Salamat (Full-time- on site) | May 2022 - Jan 2023 (9 mos)

<http://asiasalamat.ir/>

- Designed and developed a Progressive Web Application (PWA) for online nurse reservation and healthcare service requests using Nuxt 3, Vuetify, TypeScript, Pinia, and Tailwind CSS.
- Implemented responsive and accessible UI components to improve usability across devices.
- Collaborated with cross-functional teams to integrate frontend features with backend healthcare service workflows.
- Contributed to building a scalable Nuxt-based application architecture in a healthcare-focused environment.

Intern Front-End developer (Full-time) | Feb 2021 - April 2022 (1 year 3 months)

- Upgraded and refactored an existing Vue CLI-based website, improving UI structure and code organization.
- Built an admin panel to manage website content and user data.
- Developed a food ordering website with user authentication using Next.js.
- Designed and implemented a complete e-commerce website with blog functionality and role-based access (admin/customer).
- Collaborated with senior developers to implement new features and improve frontend architecture.
