SUMMARY

Self-taught frontend engineer. I started with React in 2021, found my home in Vue, and have spent four years building Vue and Nuxt products, most recently full-time in a remote Scrum team at Dongi. Learning without a roadmap made me careful and curious: I test what I ship and pick up new tools early. You can see it in Vue Smart Loading Kit, my open-source Vue library checked with mutation testing, and in a daily AI workflow with Claude Code, Codex and Copilot, kept in check by tests and types. Looking for a team where I can own a frontend and keep growing.

PROFESSIONAL EXPERIENCE

Independent Open-Source & Product Work May 2026 – Present

- Built and published Vue Smart Loading Kit and new portfolio projects (see Projects & Open Source), while deepening my testing practice and AI-assisted workflow.

Frontend Developer — Dongi (Full-time, Remote) Nov 2025 – May 2026

- Built core features of an internal CRM (Nuxt 3, Vuetify, Tailwind CSS) used daily by 50+ employees, including data tables with complex, combinable filters, working with backend developers on the REST APIs behind them.
- Improved technical SEO on Dongi's main site, a server-rendered Quasar (Vue 3) app, with meta tags, semantic HTML and Schema.org structured data (Lighthouse SEO score: 100), and shipped feature work on the same codebase.
- Delivered work in Scrum sprints, using feature branches, pull requests and code review.

Frontend Developer — Qman (Part-time, Hybrid) Jul 2024 – Jun 2026

- Led frontend development of a SaaS platform for cafe and restaurant digital menus, building 3 connected Nuxt 3 apps from scratch (public site, admin panel, owner dashboard).
- Planned frontend tasks, reviewed a second developer's code, and turned requirements into technical tasks with a non-technical project manager.
- Built a menu editor whose changes publish right away to each venue's public menu on a separate domain, delivered as a PWA (TypeScript, Pinia, Tailwind CSS).
- Designed the client-side data layer with the backend developer and turned complex Figma designs into UI flows with the designer.

Freelance Frontend Developer — Mizooni (Part-time, Remote) Mar 2024 – Jun 2024

- Built key sections of a pre-launch women's health web app with Nuxt 3, Vuetify and Tailwind CSS, working under a senior developer in a task-based workflow.
- Implemented a complex, animation-heavy UI with advanced visual effects, mobile-first and designed for non-technical users.
- Set the app up as an installable PWA, so users could add it to their home screen like a native app.

Frontend Developer — Asia Salamat (Full-time, On-site) May 2023 – Jan 2024

- Built a nurse booking PWA with TypeScript and Tailwind CSS, with responsive, accessible flows designed for elderly and non-technical users.
- Designed the app's frontend architecture and reusable component structure.
- Integrated the booking flows with the backend's healthcare scheduling logic.

Frontend Developer Intern (Full-time) 2022 – 2023

- Worked largely independently, with a senior developer mentoring me on architecture decisions and reviewing my code.
- Built my first Next.js project, a food ordering site with authentication, later rebuilt as Food Corner (see Projects).

PROJECTS & OPEN SOURCE

Vue Smart Loading Kit — open-source Vue 3 library

npm · GitHub · Live demo

- Published and maintain an MIT-licensed Vue 3 + TypeScript library on npm: skeletons, spinners, progress bars, SmartLoader and PageProgress, SSR-safe for Nuxt.
- Built a v-skeleton directive that turns real content into a matching skeleton with CSS alone: it never changes the DOM, so it works with any Vue content and causes no layout shift, verified in real-browser tests.
- Designed SmartLoader so fast requests never flash and slow ones never blink, and backed the library with unit and browser tests, mutation testing and CI.

FitPlate — AI nutrition & fitness dashboard (Next.js 16, TypeScript)

Live demo · GitHub

- Built a photo-to-nutrition app on vision LLMs (Google Gemini or Claude API), with each provider behind one interface and a demo mode that runs without an API key.
- Used one Zod schema to validate requests, type the UI and define the model's structured JSON output, keeping API keys on the server.
- Built it end to end with Claude Code as a pair programmer, using type checks and tests as guardrails.

Food Corner — food ordering app (Next.js 16, React 19, Supabase)

Live demo · GitHub

- Rebuilt my first Next.js project, moving it from Pages Router, Redux and Firebase to App Router, Server Actions and Supabase.
- Added customer and admin roles enforced with Row Level Security, server-side order pricing, and CI running lint, tests and build.

SKILLS

- **Frontend:** Vue 3 (Composition & Options API), Nuxt 3/4, Pinia, Vue Router, TypeScript, JavaScript (ES6+), HTML5, CSS3
- **Also worked with:** React 19, Next.js (App Router, Server Actions), Zustand
- **UI & Styling:** Tailwind CSS, shadcn/vue, Vuetify, Quasar, Sass/SCSS, Figma handoff
- **Architecture:** SSR/SSG, SPA, PWA, i18n & RTL, custom Vue plugins & directives, reusable component libraries
- **Web Quality:** accessibility, performance (Core Web Vitals), technical SEO (Schema.org), frontend security
- **Testing:** Vitest (unit and browser mode), Vue Test Utils, Testing Library, Playwright (E2E), Stryker mutation testing, ESLint
- **Data & APIs:** REST APIs, Axios, JWT auth, Zod, Supabase
- **Tooling:** Vite, Git (GitHub, GitLab), CI/CD (GitHub Actions), Docker, npm publishing
- **AI-Assisted Development:** Claude Code, OpenAI Codex, GitHub Copilot; LLM APIs (Claude, Gemini) with vision input and structured output

EDUCATION

Bachelor's degree in Psychology — Islamic Azad University, 2022

Self-taught frontend developer since 2021.

Courses: Vue 3/Nuxt 3, React/Next.js and TypeScript (Maximilian Schwarzmüller, Udemy).
